

The ultra-slim WAVE ID SP Plus and WAVE ID SP merge form with function.

Desktop or External Mount Applications

These multi-purpose, slim card readers for identification, authentication and logical access are available in either dual frequency (WAVE ID SP Plus) or single frequency (WAVE ID SP). The small, thin form factor enables various integrated or OEM installations in recessed compartments, as well as external mounting configurations. Additionally, the reader can fit into a variety of purpose-built devices such as time clocks, kiosks, or protective enclosures.

Designed for Flexibility and Adaptability

Versatile and scalable, the WAVE ID SP Plus combines proximity and contactless technologies into one reader, while the WAVE ID SP offers convenience for users who only utilize contactless credentials. The WAVE ID SP iClass Elite (ICE) reader offers additional convenience for users to program their own Elite and custom keys. The WAVE ID SP Plus incorporates a SIM card slot for expansion to read additional secure card types. These card readers are designed for customers seeking to leverage their existing card system for applications. The reader, combined with existing or new employee badges and application software, is the perfect trifecta for deploying solutions.

Features include:

- Four ID badge (card) configurations to accommodate multi-card systems
- Auto-tuning 13.56 MHz antenna to optimize performance in various environments
- User-selectable volume control including a beeper off setting for high noise or quiet zones
- The dual frequency pcProx Plus SP enables secure card types with a SIM card supporting iCLASS SE® and Seos® (enables additional secure card types)

Keyboard Emulation

Connecting directly into a USB port, the WAVE ID SP Plus reader emulates a keyboard and outputs the badge ID and/or site code to the cursor's location on the screen. When an employee badge is presented to the reader, employee credentials will pass instantly to an organization's back-end network for authentication and access validation with an employee database, application, or active directory. The reader is highly configurable using the rf IDEAS Configuration Utility.

User Programmable Elite and Custom Keys

In addition to reading both proximity cards (125 kHz) and contactless smart cards (13.56 MHz), this reader also interacts with Bluetooth Low Energy enabled mobile devices. These devices can carry secure authentication and identification credentials, including MIFARE Secure, to provide a convenient identity access solution for a variety of applications in every industry.

Trust begins here.™

Common Applications

Badge-based reader solutions help streamline work-flow and avoid identification errors by eliminating the need to manually enter user names and passwords. Here are some of the most common applications in key industries.

Our Most Advanced and Versatile Ultra-Slim, Multi-Purpose Credential Reader Featuring HID Mobile Authentication

The WAVE ID SP Plus HID Mobile Access and MIFARE Secure reader is an ultra-slim, multi-purpose credential reader for identification, authentication, and logical access. Its small, thin form factor enables various integrated or OEM installations in recessed compartments, as well as external mounting configurations. Additionally, the reader can be integrated into a variety of purpose-built devices such as time clocks, kiosks, or protective enclosures.

Designed for Flexibility and Adaptability

Versatile and scalable, the WAVE ID SP Plus HID Mobile Access and MIFARE Secure reader combines physical proximity smart card and contactless technologies along with **Bluetooth®** Low Energy (BLE) support for HID Mobile Access credentials onto one platform. This reader is a future-proof investment with its SIM card slot for expansion with additional secure card types. Support for HID Mobile Access enables end users to leverage their existing credential system for applications beyond building access. This reader offers additional convenience for users to program their own HID ELITE CUSTOM keys and HID MOB keys. The WAVE ID SP Plus HID Mobile Access and MIFARE Secure reader is a popular addition to the rf IDEAS portfolio of card readers known for quality and versatility.

Key features include:

- Four ID card configurations to accommodate multi-card systems
- Auto-tuning 13.56MHz antenna to optimize performance in various environments
- User-selectable volume control including a beeper-off setting for high noise or quiet zones
- Slot for SE4831 SIM (enables HID iCLASS SE®, HID iCLASS® SEOS®, and HID Mobile Access)
- Support for the MIFARE family of secure memory cards
- BLE support for HID Mobile Access credentials

Keyboard Emulation

Connecting directly into a USB port, the WAVE ID SP Plus HID Mobile Access and MIFARE Secure reader emulates a keyboard for output of the credential data. When an employee credential is presented to the reader, it will pass instantly to an organization's back-end network for authentication and access validation, application, or active directory. The reader is highly configurable using the rf IDEAS Configuration Utility and the Smartcard Manager tool.

rf IDEAS Configuration Utility and WAVE ID Smartcard Manager

The rf IDEAS Configuration Utility and the Smartcard Manager allow users to configure the reader to read both encrypted and unencrypted data on any of the four configuration settings. It also allows users to select the desired MIFARE card technologies such as DESFire®. Users can manage deployment of encrypted MIFARE Secure Keys to the reader maintaining the secure chain of custody for these encryption keys.

Trust begins here.™

Security

The WAVE ID SP Plus HID Mobile Access and MIFARE Secure reader supports both the MIFARE and the HID SE/SEOS secure credential technologies.

MIFARE

For MIFARE, the reader supports the full family of MIFARE secure credential technologies, including DESFire EV1/EV2, Classic, Plus and Ultralight. The reader uses the NXP AV2 Secure Application Module (SAM). The AV2 SAM enables the cryptographic keys can be stored and used securely. It also provides secure communication in a variety of infrastructures. The connection between the SAM and the reader is performed using security protocols based on symmetric cryptography (TDEA and AES). The protocols comply with the state-of-art standards and thereby ensure data confidentiality and integrity.

HID

For the HID secure technology, the reader uses a SIM built on HID SE processor. The iCLASS SE Processor is part of HID Global's open iCLASS SE platform that enables customers to future-proof their Secure identity infrastructures. The iCLASS SE Processor supports new SIO (Secure Identity Object™)-enabled credentials based on a variety of technologies, such as iCLASS® SE™, iCLASS Elite®, iCLASS SEOS.

Finally, the WAVE ID SP Plus HID Mobile Access and MIFARE Secure reader supports optional encryption of the card data before it is sent to the HOST system.

Mobile Credentials

With advancements in mobile credentials, the WAVE ID SP Plus HID Mobile Access and MIFARE Secure reader is an ideal investment to enable mobility for greater business performance while supporting existing infrastructures. The reader is compatible with the industry-leading HID Mobile Access credential, available from HID Global through rf IDEAS.

HID Mobile Access incorporates this highly secure platform as its underlying technology, delivered through a reliable, easy-to-use and secure online management portal as an annual subscription service. Together with the WAVE ID SP Plus HID Mobile Access and MIFARE Secure reader, the credential provides a complete logical access solution for today's mobile-dominated business environment.

Trust begins here.™

Common Applications

Credential-based reader solutions help streamline workflow and avoid identification errors by eliminating the need to manually enter usernames and passwords. Here are some of the most common applications in key industries.

Merge Form and Function in an Ultra-Slim Format for Multi-Purpose Authentication

The WAVE ID SP Plus is an ultra-slim, multi-purpose credential reader for identification, authentication and logical access. Its small, thin form factor enables various integrated or OEM installations in recessed compartments, as well as external mounting configurations. Additionally, the WAVE ID SP Plus can fit into a variety of purpose-built devices such as time clocks, kiosks, or protective enclosures.

Designed for Flexibility and Adaptability

Versatile and scalable, the WAVE ID SP Plus combines proximity and contactless technologies into one reader and is a future-proof investment with its SIM card slot for expansion with additional secure card types. These credential readers are designed for customers seeking to leverage their existing credential system for applications beyond building access. The reader, combined with existing or new employee credentials and application software, is the perfect trifecta for deploying solutions.

The WAVE ID SP Plus reader is a popular addition to the WAVE ID family of readers, known for its quality and versatility. Key features include:

- Four ID card configurations to accommodate multi-card systems
- Auto-tuning 13.56MHz antenna to optimize performance in various environments
- User-selectable volume control including a beeper off setting for high noise or quiet zones
- Slot for optional SIM secure module (HID iCLASS SE® and HID iCLASS® Seos®; NXP AV2 for MIFARE® and MIFARE® DESFire® EV1 and EV2.) enables additional secured types

Keyboard Emulation

Connecting directly into a USB port, the WAVE ID SP Plus reader emulates a keyboard and outputs the credential ID and/or site code to the cursor's location on the screen. When an employee credential is presented to the reader, it will pass instantly to an organization's back-end network for authentication and access validation with an employee database, application, or active directory. The reader is highly configurable using the WAVE ID Configuration Utility.

Smartcard Manager

The Smartcard Manager allows users to configure the reader to read both encrypted and unencrypted data on any of the four configuration settings. It also allows users to select the desired MIFARE card technologies such as DESFire®. Users can deploy an encrypted MIFARE Secure Key to the reader which prevents exposure of the keys.

Common Applications

Credential-based reader solutions help streamline workflow and avoid identification errors by eliminating the need to manually enter user names and passwords. Here are some of the most common applications in key industries.
