

Wireless I/O: BusWorks® NTW Series

NTW2320 Wi-Fi Ethernet Analog Output Modules

8 process voltage outputs ♦ Ethernet I/O plus Expansion I/O ♦ Multi-protocol support

BusWorks® NTW2000 modules offer a cost-effective, wireless solution for Ethernet remote I/O systems. NTW Wi-Fi models provide the protocol interface plus I/O signal processing channels. Connecting NTX expansion modules can add extra I/O channels or a mix of signal types over a single Wi-Fi interface.

NTW2320 modules offer 8 voltage outputs. Each output is driven by a 16-bit DAC. Each module has an embedded wireless IoT gateway providing a Wi-Fi interface to control voltage signal levels. An RJ45 port provides additional flexibility for a cabled network interface.

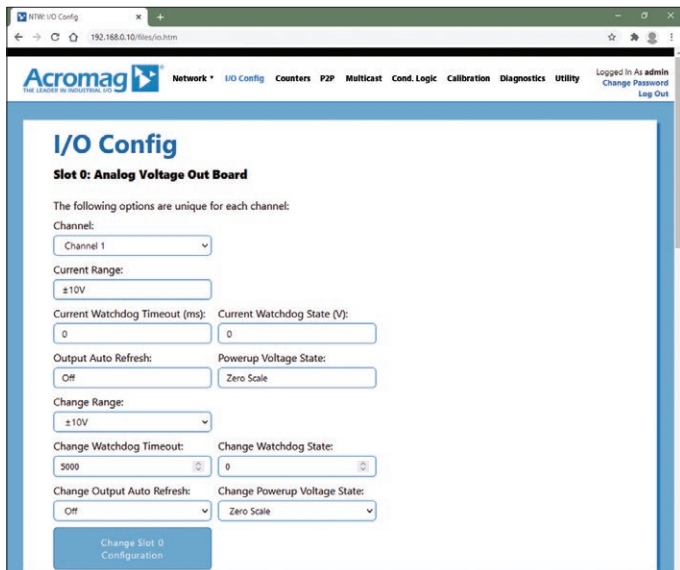

Applications include controlling analog actuator levels and driving recorders, displays, or other process instruments. Voltage outputs can control generator power, drive speed, or valve positioning.

An isolated RS-485 bus links up to three NTX expansion modules to the NTW Wi-Fi module with connectors that join units along the DIN rail. This internal NT bus distributes power and communication between the modules. Users can mix temperature, current, voltage, and discrete I/O modules across the NT bus.

Acromag's i2o® messaging technology allows direct peer-to-peer communication between remote modules without a master controller.
